Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Response to Amendment

1. The finality of the rejection of the last Office action is withdrawn.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 14-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lodge et al (US5188859) in view of Fritz (US5322182).

Lodge et al discloses a method for producing foods which may be cooked in the presence of microwave energy comprising the steps of selecting a friable food, compressing the food into a pellet, and coating the surface with a microwavable heatable substance (abstract; column 6, lines 17-20). Lodge et al does not disclose packaging the pellets in a microwavable container having a top and a bottom layer of heat resistant plastic wherein the container defines an interior and exterior and a separating means for separating the interior of the container wherein the separating means comprises a seal. Fritz discloses a microwavable container having a top and a bottom layer of heat resistant plastic wherein the container defines an interior and exterior and a separating means for separating the interior of the container wherein the separating means comprises a seal (column 3, lines 60-66; column 4, lines 8-16; column 5, lines 1-10). It would have been obvious to one of ordinary skill in the art at the time the invention was made to have included the container of Fritz in the method of Lodge et al because, a container multi-

compartmented microwaveable container allows the food items to achieve a high degree of efficiency and temperature uniformity during heating/cooking.

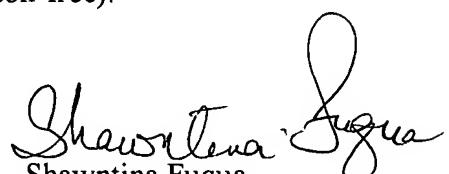

Conclusion
